RE: Nutrient Offset Plan Report

Dear Mr. Hansen:

This letter serves as the eleventh installment of the Pinnacle Foods Corporation's Nutrient Offset Plan Report. As required by Special Condition #7 of Pinnacle's NPDES Permit DE 0000736, "The permittee shall submit progress reports every six months outlining actions taken toward implementing this plan".

The annual fertilizer application was completed in March. As agreed, 30-lbs/acre nitrogen (ammonium sulfate) and 120-lbs/acre potash (muriate of potash) were applied. Spray irrigation operations began on May 4th for the 2006 calendar year.

The field was cut on May 29th and 30th. However, due to damp conditions in June, the hay could not be removed. Due to the weather, the hay began to mold before the farmer could get it raked and baled. It could not be used by cattle, so it was left on the field to break down. This will offer some additional nutrients to the grass stand this summer.

Weed killer is scheduled to be applied in the next few days – weather permitting. This will give the orchard grass a better opportunity to further establish itself in the high sandy areas.

Should you have any questions, please call me at 302-934-3833.

Sincerely,

Beth B. Sise
Environmental Control Mgr.
